

Hexagon Connected Worker

Your path to optimised business operations and rapid digital evolution

Optimise your operations and enhance productivity with Hexagon Connected Worker. Our digital solution portfolio for manufacturing facilitates seamless data integration, boosts cross-functional digital capabilities, and enables real-time decision-making. By breaking down information silos and transitioning manual processes into efficient digital workflows, it ensures manufacturing excellence and operational efficiency. Explore Connected Worker solutions to optimise your business operations and embark on a rapid digital evolution to improve productivity.

Drive operational excellence

Utilise Connected Worker Operations to optimise processes, enhance availability, and increase productivity.

Empower quality control

Implement standardised inspections, swift responses, better yields, and reduced scrap through real-time reporting using Connected Worker Quality.

Streamline capital equipment management

Leverage Connected Worker Maintenance to track capital equipment, optimise schedules, and lower costs.

Elevate operations

Deploy Connected Worker Audits to ensure safety and optimal outputs through operator-friendly digital audits, visual guidance, and data utilisation.

 Connected Worker Operations

Elevate your business with Connected Worker Operations, offering a comprehensive range of digital workflows that streamline processes, enhance availability, and supercharge productivity.

Uncover heightened availability by proactively identifying and mitigating downtime triggers. Elevate shop floor efficiency through real-time monitoring, precision refinement, and risk mitigation by seamlessly capturing crucial data. Embrace digital transformation by illuminating production data, optimising shop floor velocity through OEE Dashboards.

Capabilities:

Downtime Tagging, Real-time (AR) Monitoring, Daily Report, Machine Connectivity, Execution & Traceability, Paperless Traveler, OEE Dashboards.

 Connected Worker Audits

Uphold machinery safety and drive optimal output with Connected Worker Audits, integrating operator-friendly digital audits, visual guidance, and data utilisation. Prepare production lines seamlessly for transitions or changeovers, empower workforce management of maintenance tasks, and uphold quality with end-of-shift equipment and process assessments.

Capabilities:

Line Clearance, Autonomous Maintenance Tracking, Pre-Shift Inspection, S5 Audits.

 Connected Worker Maintenance

Revolutionise capital equipment tracking, schedule optimisation, and cost reduction with Connected Worker Maintenance.

Unlock peak performance through real-time data insights and cutting-edge mobile solutions. Safeguard machinery longevity and safety through asset management. Stay proactive by countering equipment breakdowns with Preventive & Predictive Maintenance, bridging field and planning teams with Field Service Work Orders, and monitoring capital equipment utilisation.

Capabilities:

Asset Management, Preventive & Predictive Maintenance, Critical Spare Parts Inventory, Field Service Work Orders, Equipment Utilisation, Tool Tracking.

 Connected Worker Quality

Elevate quality control with Connected Worker Quality workflows, ensuring uniform inspections leading to rapid responses, elevated yields, and reduced scrap via real-time reporting.

Address defects promptly, minimise wastage through efficient rework process management, streamline inspections, and centralise data for informed decision-making. Stay ahead by proactively monitoring inputs, ensuring seamless operations, and preventing potential issues.

Capabilities:

Defect Tracking, Rework Tracking, Inspection Workflows, Inspection Data Management, Process Input Monitoring.
